Duke DEPARTMENT of COMPUTER SCIENCE

CampusWorks

TA/RA hiring and course support

For departments, faculty, assistants and students

Independent project · synthetic demonstration

A fragmented hiring workflow

One application. Three places to coordinate.

Application → **Course duties** → **Follow-ups**

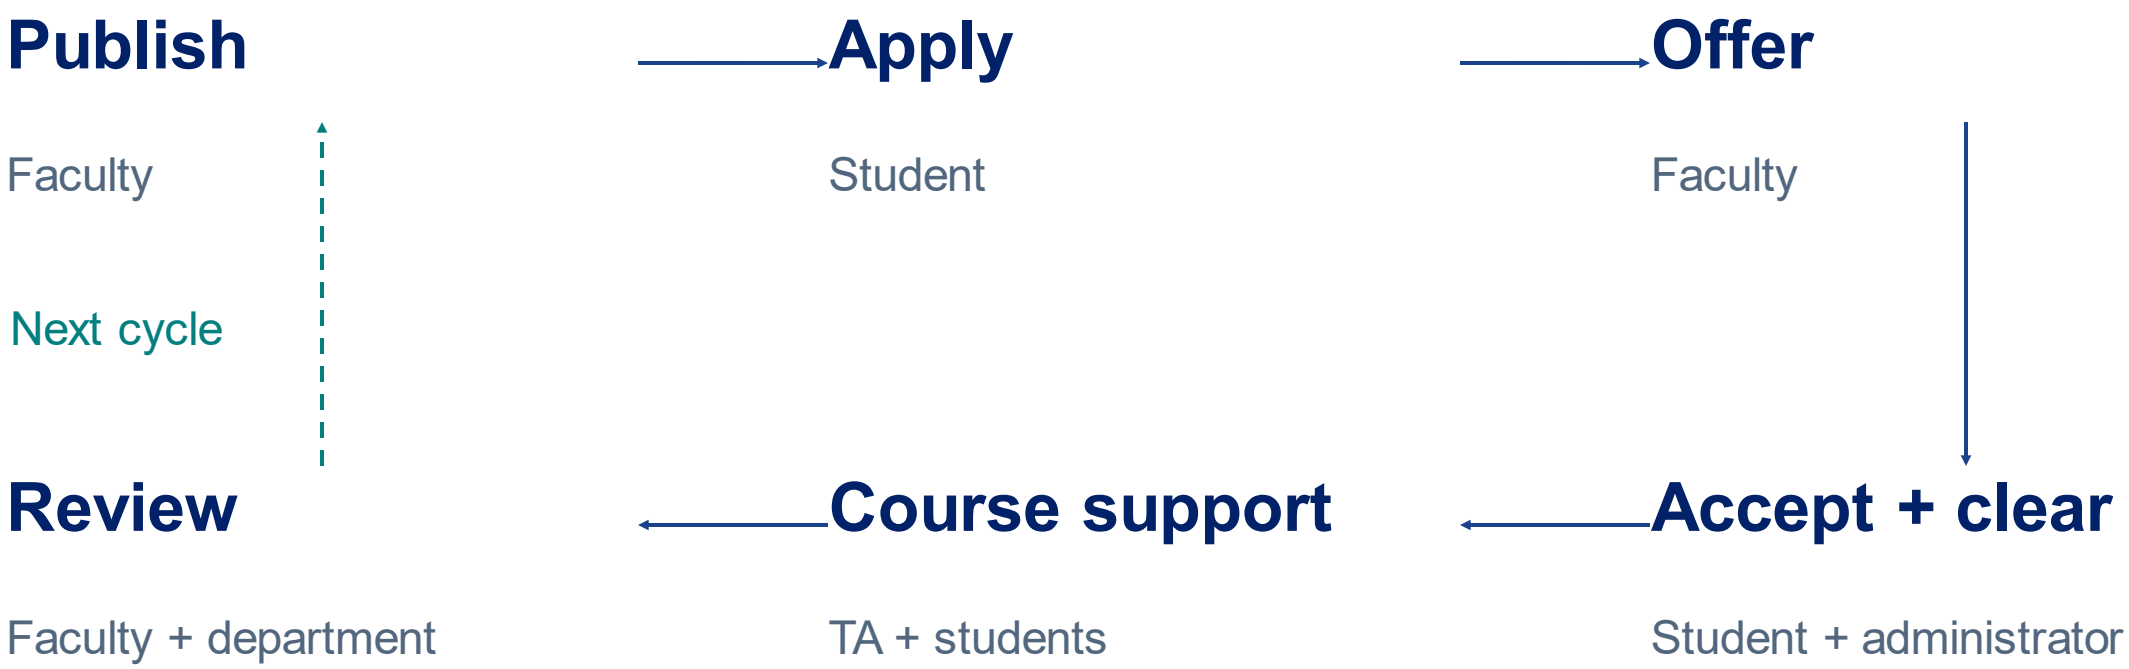

Microsoft Forms | Excel | Email

Who owns the next handoff?

Match applicants · Avoid conflicting offers · Activate course access

Observed example: supplied recruitment email, application form and duties spreadsheet

A connected assistant lifecycle

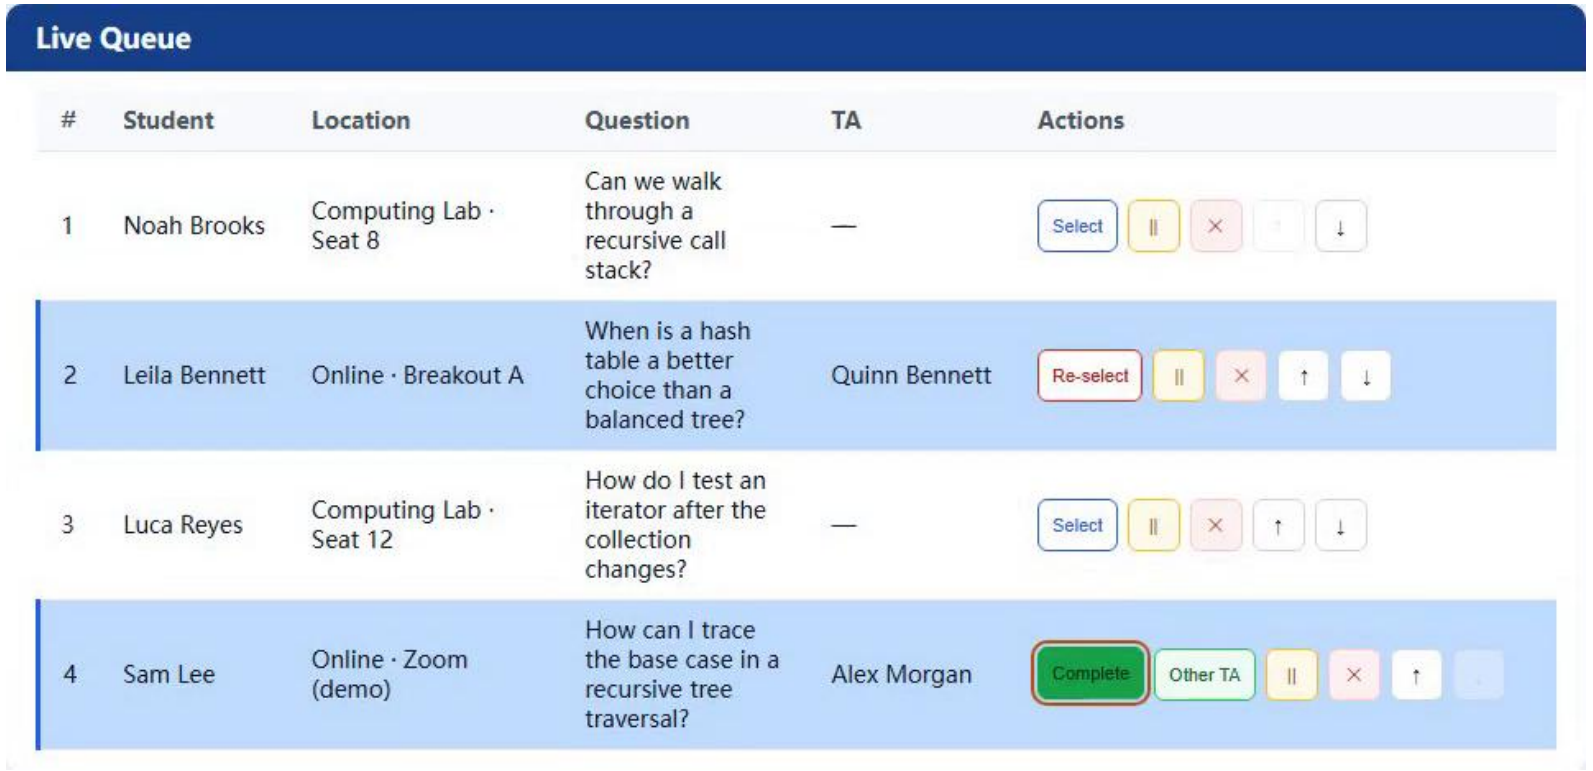

RA uses applications and appointments; TA appointments additionally enable course queues

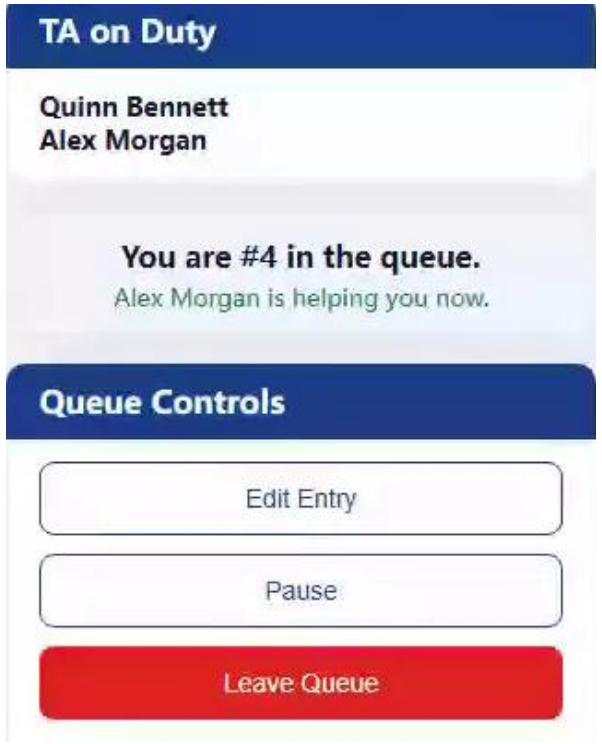

Deadline night: one shared queue

Course-specific questions still need course staff.

TA view

Student view

Visible order

Shared ownership

Clear helper status

Genuine paired views · synthetic CS201 session · on-duty TAs can hand off or reorder

AI supports the hiring decision

Four advisory steps. Human decisions.

Draft requirements

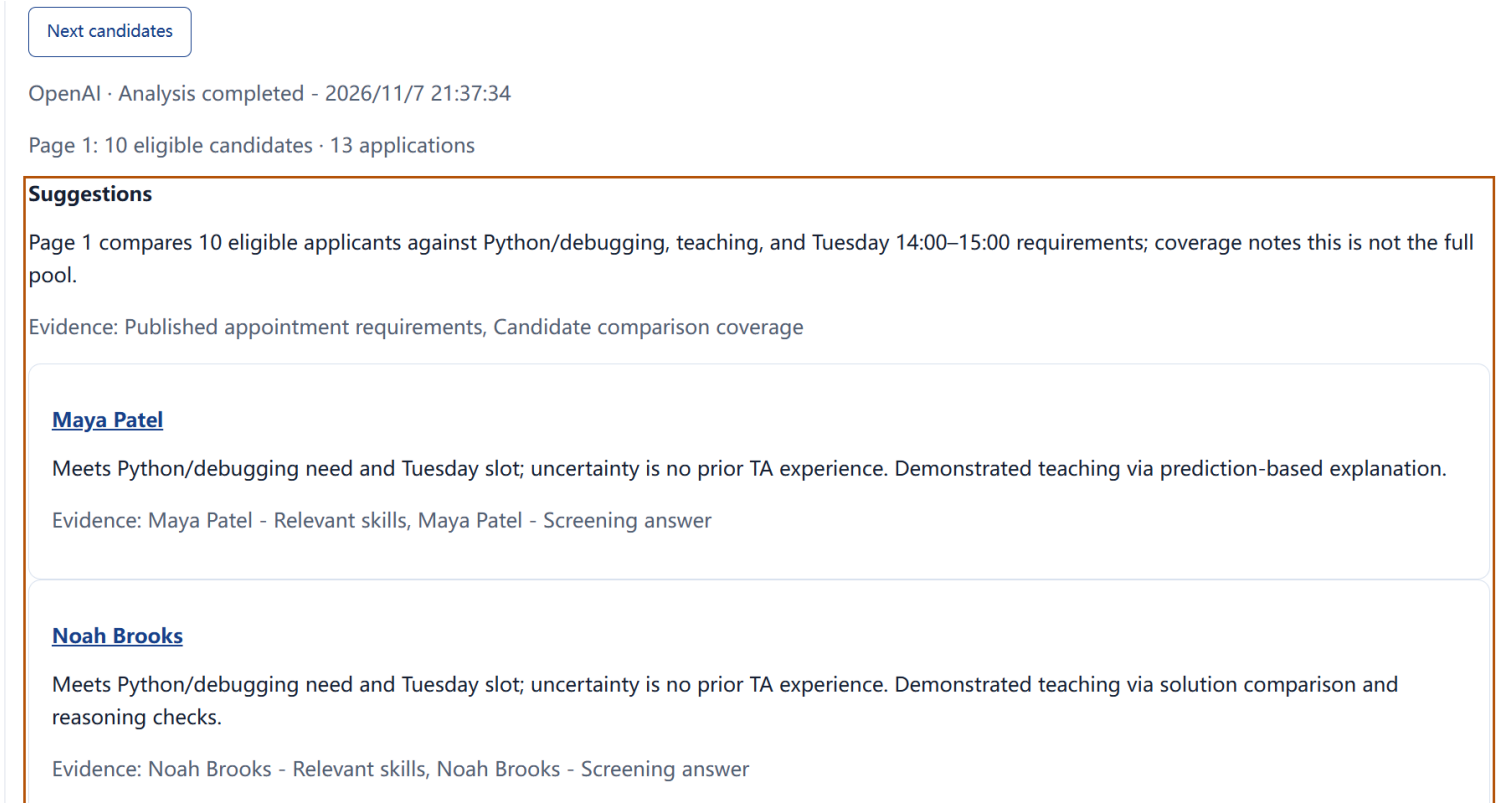

Summarize qualifications

Compare candidates

Suggest course changes

People choose and approve.

Available candidates · recorded example

Saved real OpenAI outputs on synthetic evidence · no automatic hiring · uploaded CV bytes are not parsed

Customers and beneficiaries

Proposed first buyer

CS department

Champions

Program staff
+ course lead

Department	See staffing and support demand
Faculty	Recruit and coordinate the team
TA	Know who needs help next
RA	Track application and offer status
Students	See their position and helper

Also benefits: remote students, commuters and teaching coordinators

Buyer and commercial path are proposals for validation; institutional adoption is not established

Evidence for the next teaching cycle

When students need help

Recorded request arrivals · Eastern Time

Fewer More

Course advice, with evidence limits

CS201 shows recorded help demand with moderate waits, but coverage evidence is incomplete and self-reported workload is not verified. Course, office-hour, and teaching-load follow-up questions are needed before staffing conclusions.

Evidence: Recorded queue activity, Evidence limitations

Saved real OpenAI output · synthetic observations · demand alone does not establish required TA headcount

Start with one department

One cycle.
A few busy courses.

Pilot measures

Hiring handoffs
Peak-night service
Student clarity

Proposed model

Annual department subscription
+ onboarding

Expand: engineering · math/statistics · learning centers

Next: SSO · reliable wait-time ranges
